Executive Summary

- **Overall Market Performance:** In August 2026, global markets broadly recovered, led by strong gains in digital assets (Bitcoin +25.0%, Ethereum +32.6%, Solana +41.5%) and U.S. equities (Nasdaq +3.9%, S&P 500 +2.6%, Dow +1.3%). Gold rose 9.9%, while Real Estate fell 4.0%.

- **G20 Macro Environment:** Central banks maintained a "wait and watch" approach in August, holding rates steady across most G20 economies. The Central Bank of Brazil was an exception cutting the Selic rate by 25 bps. Markets are monitoring potential trade frictions, fiscal deficit management, and the broader realization of AI-driven capital expenditures.

- **Crypto Market Dynamics:** All DeFi categories saw growth in August, with Oracles (+30.8%) leading market cap gains. Institutional interest remained strong, with U.S. spot BTC and ETH ETFs recording net inflows of US$3.5 billion and $1.8 billion, respectively.

- **Crypto Regulatory Developments:** Regulatory activity intensified. The U.S. Treasury proposed stablecoin rules under the GENIUS Act, the Bank of England received an innovation mandate, and South Korea, Japan, and Brazil tightened transfer and exchange controls to combat fraud and money laundering. Pakistan opened its licensing portal for virtual asset service providers.

- **Equity Market Trends:** U.S. markets were driven by AI and semiconductor optimism, particularly following strong Nvidia earnings. European markets hit record highs early in the month but faced late volatility from geopolitical tensions and rate expectations. Asian markets were split: Japan and South Korea advanced on earnings and capital rotation, while India and Hong Kong faced corrections.

- **New Developments in Crypto and TradFi:** Crypto.com launched Tokenized Stocks, partnered with Trading Technologies, and expanded Pay™ integrations to Dubai Duty Free and REAL Jet. Institutional adoption continued as BlackRock launched tokenized money market funds, Wells Fargo announced tokenized deposits, and Charles Schwab expanded its crypto platform offerings.

- **Outlook on Key Projects:** Bitcoin saw net accumulation return as demand recovered, Ethereum advanced its roadmap focusing on quantum readiness, and Solana expanded its remittance ramps. Projects such as Ethena Labs and World Liberty Trust also progressed.

1. Overview

Global financial markets experienced a broad recovery in August, characterized by a powerful rebound in digital assets and positive momentum across major equity benchmarks. Digital assets delivered standout performances, with Bitcoin (+25.0%), Ethereum (+32.6%), and Solana (+41.5%) showing significant gains. This optimism extended to the U.S. equity market, where the Nasdaq Composite (+3.9%), S&P 500 (+2.6%), and Dow Jones Industrial Average (+1.3%) all posted gains. Gold continued its ascent (+9.9%), while the Real Estate faced a correction (-4.0%).

Assets	Jul	Aug	Q1	Q2	H1	YTD
BTC	+7.3%	+25.0%	-22.0%	-14.2%	-33.1%	-10.3%
ETH	+18.5%	+32.6%	-29.1%	-25.4%	-47.1%	-17.0%
SOL	-1.0%	+41.5%	-33.3%	-11.5%	-41.0%	-17.3%
S&P 500	-0.1%	+2.6%	-4.6%	+14.9%	+9.6%	+12.3%
Dow Jones Industrial Average	+0.3%	+1.3%	-3.6%	+12.9%	+8.9%	+10.7%
Nasdaq Composite	-3.2%	+3.9%	-7.1%	+21.4%	+12.8%	+13.5%
Gold	+0.9%	+9.9%	+8.6%	-14.4%	-7.0%	+3.1%
MSCI World Index	+0.5%	+2.5%	-3.9%	+13.3%	+8.9%	+12.1%
MSCI Emerging Markets	-3.3%	+3.2%	-0.5%	+23.3%	+22.7%	+22.4%
Bloomberg Commodity Index	+7.2%	+7.1%	+23.3%	-8.9%	+12.3%	+28.9%
Bloomberg Global Aggregate Bond Index	-1.2%	-1.2%	-1.9%	+1.5%	-0.5%	-2.9%
FTSE EPRA Nareit Global Real Estate Index	+0.9%	-4.0%	+0.8%	+10.1%	+11.0%	+7.6%

1.1 Macro of the G20 Economies

August highlighted a widening policy divide across G20 economies as central banks balanced persistent energy-driven inflation against uneven domestic performance.

Monetary Policy

August was largely a "wait and watch" month across G20 central banks, with most holding rates steady following July decisions:

- **U.S. Federal Reserve:** Held the federal funds target range at 3.50%-3.75% (decided July 29, 9–3 vote). August 19 minutes confirmed a hawkish tone.

- **European Central Bank:** Held its three benchmark rates steady (deposit facility 2.25%, main refinancing 2.40%, marginal lending 2.65%). The August 27 account of the July meeting signaled a potential policy shift in September.
- **Bank of Japan:** Held its policy rate, targeting the overnight call rate near 1.00% (July 30–31, 8–1 vote).
- **Bank of England:** Held Bank Rate at 3.75% (6–3 vote, with three members favoring a hike to 4.00%). The next rate decision is September 17.
- **People's Bank of China:** Kept Loan Prime Rates unchanged for the 15th consecutive month (1-year LPR at 3.00%, 5-year+ at 3.50%), signaling cautious easing amid soft domestic demand.
- **Reserve Bank of India:** Kept the repo rate unchanged at 5.25% in a unanimous vote, maintaining a neutral stance.
- **Banco Central do Brasil:** This outlier: cut the Selic rate by 25 bps to 14.00% on August 5 while leaving the door open for further easing. Brazil's rate remains the highest in the G20.

Outlook

- **Trade Frictions and Tariffs**: Section 301 tariffs (10%-12.5%) across dozens of trading partners, alongside ongoing U.S.-EU trade friction, pose cost risks to supply chain costs and headline price indices heading into Q4.

- **Fiscal Deficits and Sovereign Debt**: Rising debt-service costs are constraining fiscal flexibility in both developed and emerging markets. Managing the overlap between central bank quantitative tightening (QT) and sovereign debt management will be critical for bond market stability.

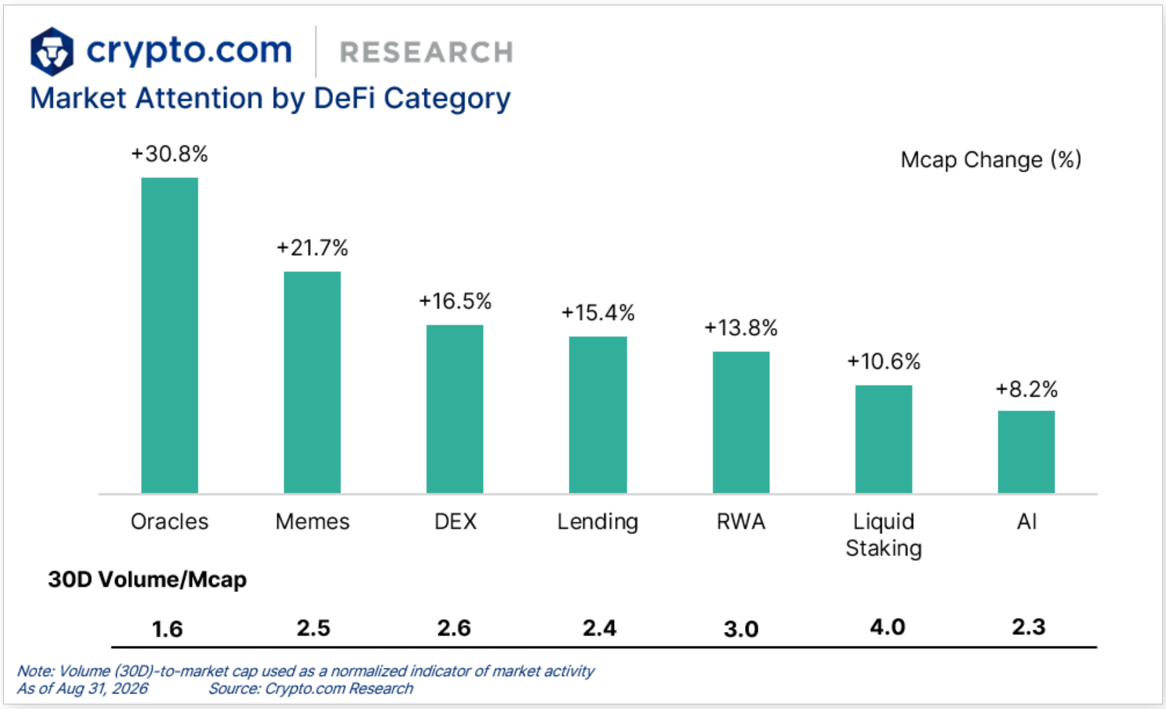
- **AI Capex Realization**: Technology-driven capital expenditure (capex) remains a key structural tailwind. If AI-driven productivity gains expand beyond technology sectors into traditional services and manufacturing, potential output across G20 economies could see an upward re-rating through 2027.

1.2 Crypto Market

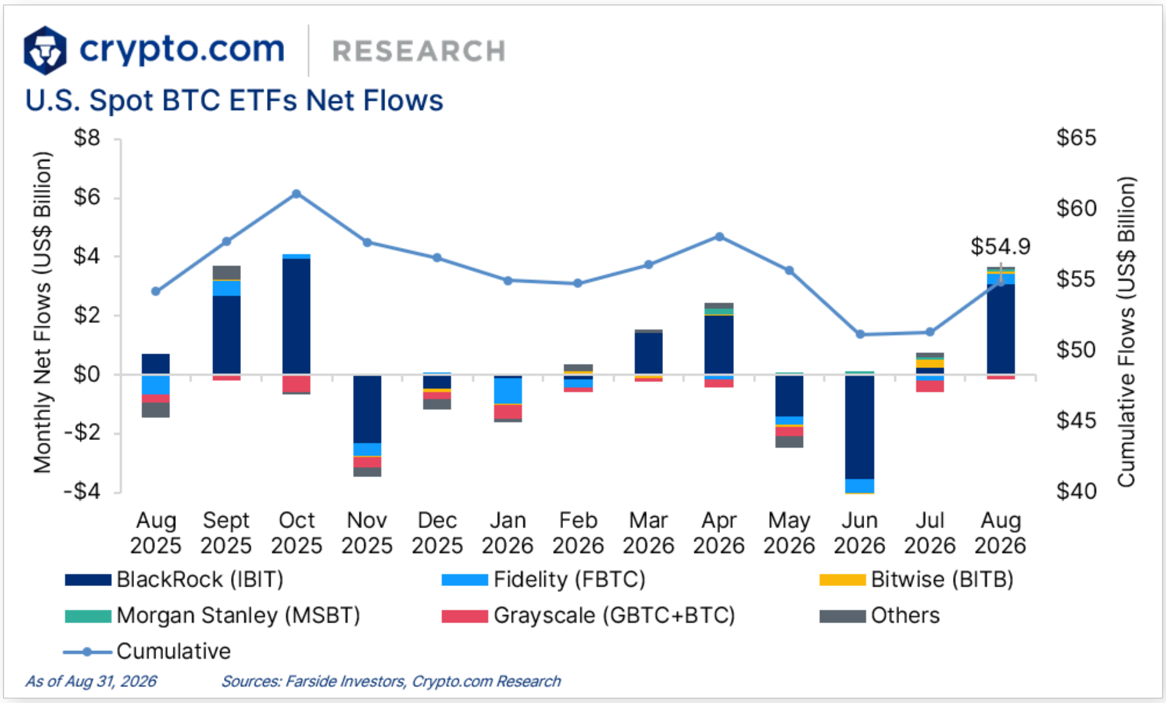
Decentralized finance (DeFi) categories all increased in August. Oracles (+30.8%) led market cap growth, while Liquid Staking captured the highest market attention (Volume/Mcap ratio).

Within Oracles, Chainlink (LINK) surged 32% in market cap, driven primarily by its token repurchase operation and whale activity.

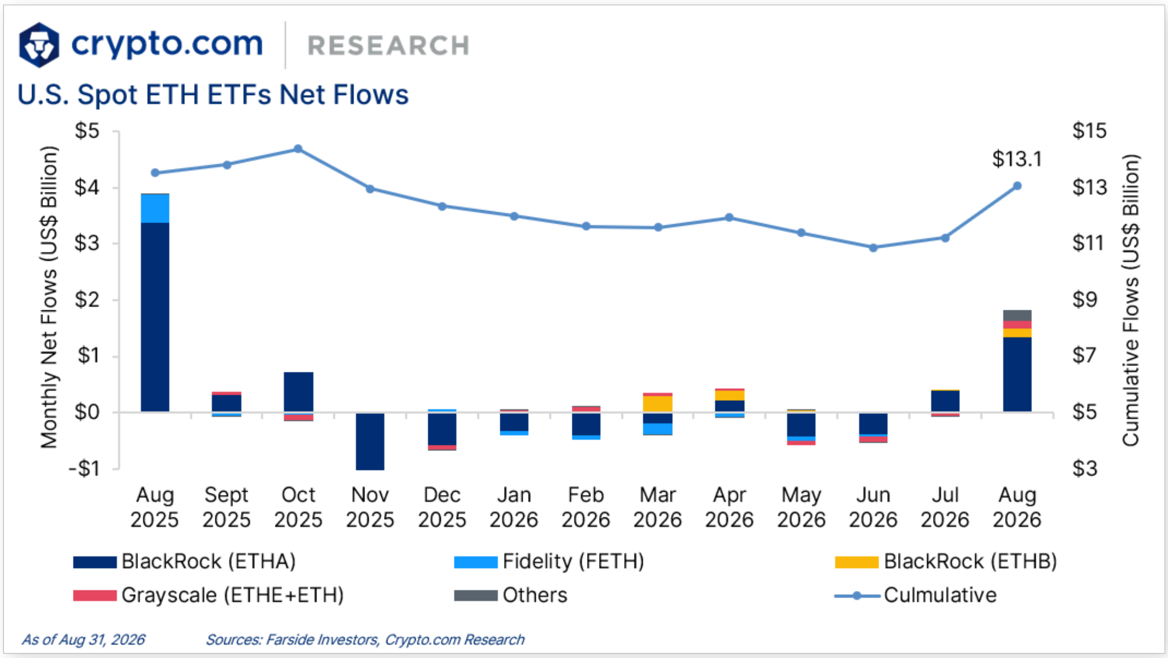
Ether.fi (ETHFI) was the primary driver of Liquid Staking activity. It [expanded its offerings to include tokenized stocks, metals, and Aave-powered portfolio loans](). As part of a broader "neobank" expansion, the protocol is shifting to a less crypto-centric user interface to target mainstream consumers.



U.S. spot BTC ETFs recorded a net inflow of $3.5 billion in August, its highest level since October 2025.



Meanwhile, U.S. spot ETH ETFs saw a net inflow of $1.8 billion in August, its highest level since August 2025.



1.3 Crypto Regulatory Updates

Region	Crypto Regulatory Updates
U.S.	• The Treasury Department proposed stablecoin rules implementing Section 3 of the GENIUS Act, defining covered issuers and establishing regulatory requirements. The proposal aims to foster payment-stablecoin innovation while reinforcing the U.S. dollar's global role. Public comments will remain open for 60 days, with final rules targeted for January 2027. • The Securities and Exchange Commission (SEC) proposed a tailored framework for certain crypto-asset investment contracts after Congress failed to advance the CLARITY Act before recess. The proposal includes potential issuance exemptions, reporting obligations, and a safe harbor for certain tokens. While it may offer interim regulatory clarity, legislation remains necessary for a durable framework. • Commodity Futures Trading Commission (CFTC) Chair Michael Selig said the agency could proceed with crypto-related rules even if Congress does not pass the CLARITY Act. Potential focus areas include leveraged or margined crypto trading and developer protections. This signals that regulators may pursue administrative action while legislation remains stalled, increasing the possibility of overlapping or evolving rules.
United Kingdom	• The Bank of England (BoE) is set to receive a secondary mandate supporting digital payment innovation, including stablecoins and other digital settlement assets. Financial stability remains its primary objective, with annual progress reports to Parliament.
South Korea	• South Korea approved amendments removing the 1 million won (around $700) threshold for the Travel Rule, extending sender-and-recipient data requirements to all transfers between registered virtual asset service providers (VASPs). Additional risk controls will apply to overseas exchanges and personal wallets.
Japan	The Japan Financial Services Agency (FSA) requested crypto exchanges to impose withdrawal delays and stricter safeguards to combat digital asset fraud. Proposed measures include mandatory pre-registration of withdrawal addresses and holding periods to prevent victims from rapidly transferring funds to scammers.

Brazil	• The Central Bank of Brazil (BCB) ordered cryptocurrency exchanges to delay large crypto transfers and self-custody wallet transactions for up to 24 hours to counter money laundering and fraud. Effective January 2027, the rule mandates holds on transactions over $10,000 or those flagged as risky, placing greater screening responsibility on exchanges.
Pakistan	Pakistan's Virtual Assets Regulatory Authority (PVARA) opened a licensing portal, setting September 5 as the deadline for existing VASPs to apply for a no-objection certificate or cease operations. The framework covers exchanges, custody, brokerage, lending, derivatives, asset management, token issuance, and related services.

1.4 Equity Market

U.S.

The U.S. stock market delivered a broad, AI- and semiconductor-led rally in August, with all three major benchmarks posting monthly gains. The Nasdaq Composite led on renewed AI infrastructure optimism following blockbuster Nvidia earnings, while the S&P 500 set a new record high mid-month. Gains were tempered late in the month by a hawkish Jackson Hole speech and a spike in oil prices tied to renewed U.S.-Iran tensions.

Nasdaq Composite	**+3.9%**
S&P 500	**+2.6%**
Dow Jones Industrial Average	**+1.3%**

Key Driving Factors

- **AI Infrastructure and Chip Earnings**: Nvidia's August 26 earnings and stronger-than-expected outlook reassured investors on AI chip and data center demand. Shares jumped 8.7% the following session on August 27, lifting the broader semiconductor complex and bringing the Philadelphia Semiconductor Index up roughly 63% year-to-date.

- **Cooling Labor Market and Rate Relief**: A softer-than-expected U.S. jobs report on August 7 eased interest-rate concerns, helping the S&P 500 close at a record high and lifting the broader market's risk appetite early in the month.

- **Late-Month Oil Shock and Fed Hawkishness**: Renewed U.S.-Iran hostilities pushed crude oil higher and revived inflation fears. Simultaneously, Fed Chair Kevin Warsh's hawkish tone at Jackson Hole lifted Treasury yields, capping gains into month-end and weighing most heavily on the Dow and cyclical shares.

Sector and Style Dynamics

- **Factor Rotation:** The AI and growth trade reasserted leadership as chip and software earnings beat expectations, while defensive, low-volatility positioning lagged as risk appetite returned.

- **Outperforming Sectors:** Energy led with gains of roughly 7.0%, benefiting from a late-month spike in crude prices. Information Technology followed closely at approximately 6.2%, powered by Nvidia's earnings and Salesforce's raised guidance. Materials also rose around 5.9%.

- **Underperforming Sectors:** Utilities lagged, falling roughly 4.8% as bond yields rose, while Industrials declined about 2.6% and Communication Services also fell amid profit-taking and rotation away from defensive and rate-sensitive names.

Europe

European equities closed August modestly higher, with the pan-European benchmark securing its fifth consecutive monthly gain despite fading late-month momentum. The STOXX Europe 600 reached a new record high early in the month on strong Q2 earnings and AI-driven technology optimism. However, rising oil prices, firmer bond yields, and expectations of tighter European Central Bank (ECB) policy trimmed gains into month-end. Performance diverged across markets: Germany's DAX led on industrial and financial strength, while France's CAC 40 lagged on domestic fiscal and political uncertainty.

Europe	EURO STOXX 50	+1.0%
Europe	STOXX Europe 600	+0.3%
UK	FTSE	-0.7%
Germany	DAX	+2.5%
France	CAC 40	-2.1%

Primary Market Drivers:

- **Earnings and AI-Led Records**: European equities set record highs early in August on broad earnings strength and AI enthusiasm, securing a fifth straight monthly gain for the STOXX Europe 600.
- **Late-Month Oil and Inflation Shock**: An early-month risk-on tone driven by strong earnings and AI optimism gave way late in the period, as renewed geopolitical tension pushed crude oil higher and revived inflation concerns.
- **Tighter ECB Policy Expectations**: With Eurozone inflation remaining above target and policymakers signaling a less accommodative path, markets priced in tighter ECB policy, lifting bond yields and weighing on equities into month-end.
- **Q2 Corporate Earnings**: Resilient Q2 results, particularly across banks and industrials, supported early-month gains before high-profile corporate misses and macro headwinds limited further gains.

Sector Rotation:

- **Outperforming Sectors**: Basic Resources led the market, gaining 9.42% on firmer commodity prices, followed by Technology at +4.30% on AI momentum. Financial Services rose 3.23% as banks benefited from resilient Q2 earnings and durable net interest income.

- **Underperforming Sectors**: Consumer Staples was the weakest performing area, with Food & Beverages down 3.42% and Personal & Household Goods falling 2.75%. Construction & Materials declined 2.18% as rising bond yields pressured rate-sensitive and defensive names.

Asia

Asian equity markets were broadly resilient in August, though regional performance diverged sharply. North Asian developed markets led: Japan's Nikkei 225 climbed on strong earnings and a weaker yen, while South Korea's KOSPI advanced as capital rotated away from volatile semiconductor heavyweights into other sectors. Greater China was mixed, with mainland shares edging higher on policy support while Hong Kong slipped. South Asia lagged, as high valuations, foreign outflows, elevated oil prices, and U.S. rate uncertainty dragged down India's Sensex and Nifty 50. Southeast Asia and Australia recorded steady gains, led by financial sector strength.

China	CSI 300	+0.8%
Hong Kong	HSI	-1.2%
India	Sensex	-1.5%
	Nifty 50	-1.2%
Japan	Nikkei 225	+3.0%
South Korea	KOSPI	+3.4%
Singapore	STI	+2.3%
Australia	ASX 200	+1.1%

China

- **Drivers**: Mainland shares edged higher as targeted stimulus, resilient industrial output, and steady state support offset soft domestic consumption and property-sector caution.

- **Sector Rotation:** Inflows favored high-dividend state-owned enterprises (SOEs), industrial capital goods, and domestic technology, while consumer-facing and property names lagged.

Hong Kong

- **Drivers**: The Hang Seng slipped modestly, giving back some of its strong year-to-date gains as profit-taking in Chinese mega-cap tech and caution ahead of key earnings weighed on sentiment.

- **Sector Rotation**: Chinese internet and platform equities saw two-way flows after a powerful rally, while insurers and select financials outperformed hardware and property developers.

Japan

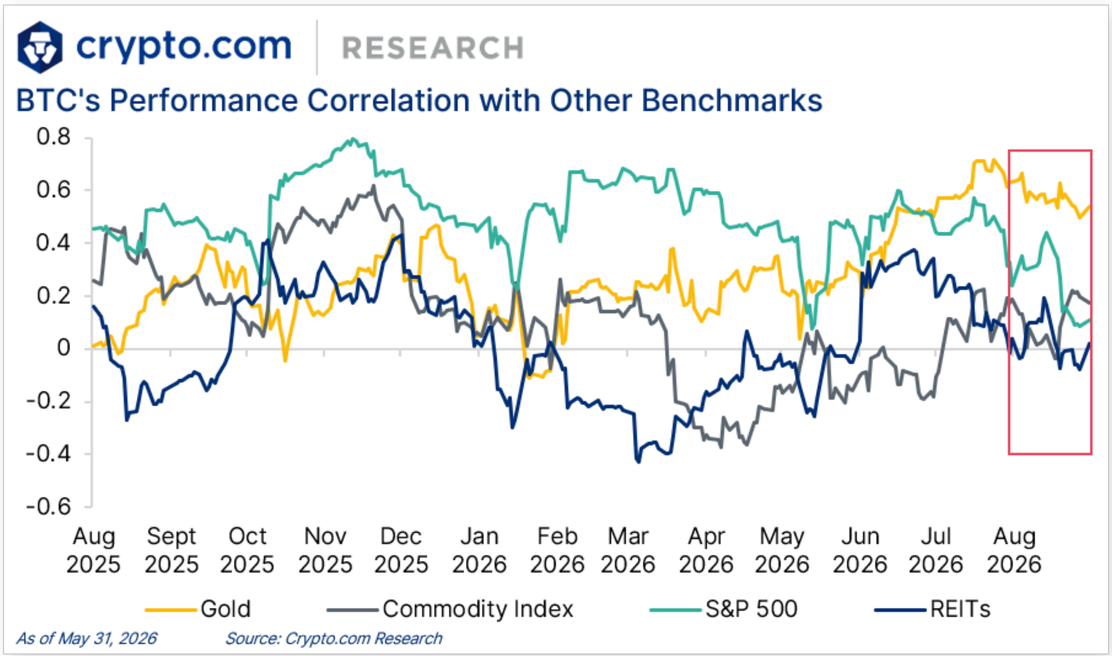
- **Drivers:** The Nikkei 225 rose toward its highs on strong corporate earnings, ongoing governance-driven buybacks, and a weaker yen that boosted exporters, even as chip-related suppliers experienced bouts of volatility.
- **Sector Rotation:** Exporters, megabanks, and value cyclicals led gains, while some semiconductor-linked names lagged during mid-month global chip volatility.

South Korea

- **Drivers**: The KOSPI advanced despite heavy volatility in Samsung Electronics and SK Hynix, as capital rotated out of concentrated semiconductor positions into other sectors and the index consolidated its 2026 gains.
- **Sector Rotation**: Construction, automotive, and other domestic cyclicals attracted strong inflows, offsetting weakness in memory chip heavyweights and breaking the typical correlation between chip stocks and the benchmark index.

1.5 Performance Correlation

The rolling 30-day return correlation between Bitcoin and Gold remained elevated between 0.50 to 0.60 throughout August. Meanwhile, Bitcoin's correlation with the S&P 500 dropped to 0.10, while its correlation with Commodity and REITs fluctuated between 0.20 and -0.10.



2. New Developments

2.1 Crypto.com News

- **Crypto.com** launched Tokenized Stocks, a new app feature enabling eligible users to gain price exposure to U.S. equities and ETFs through derivative tokens. Available to users in the EEA and select global jurisdictions, the service offers access to over 1,500 underlying assets with a minimum $1 investment.
- **Trading Technologies (TT)** announced a strategic partnership with Crypto.com to integrate connectivity to OG.com, Crypto.com's CFTC-regulated exchange and clearinghouse, directly into the TT trading platform. Scheduled to launch in Q4 2026, the integration will provide institutional clients with access to regulated prediction markets and digital asset derivatives.
- **Dubai Duty Free** became the first airport retailer in the Middle East to integrate Crypto.com Pay™ as a regulated digital payment option. Launched on August 5, the initiative enables eligible UAE residents to make purchases at Dubai International Airport (DXB), Al Maktoum International Airport (AMIA), and on Dubai Duty Free's online store via the Crypto.com App.

- **REAL Jet**, a REAL SLX subsidiary, became the first private aviation company to accept Crypto.com Pay™ for private charter flight bookings. The integration allows eligible U.S. residents to settle bookings in U.S. dollars using Crypto.com's digital payment solution.

2.2 TradFi

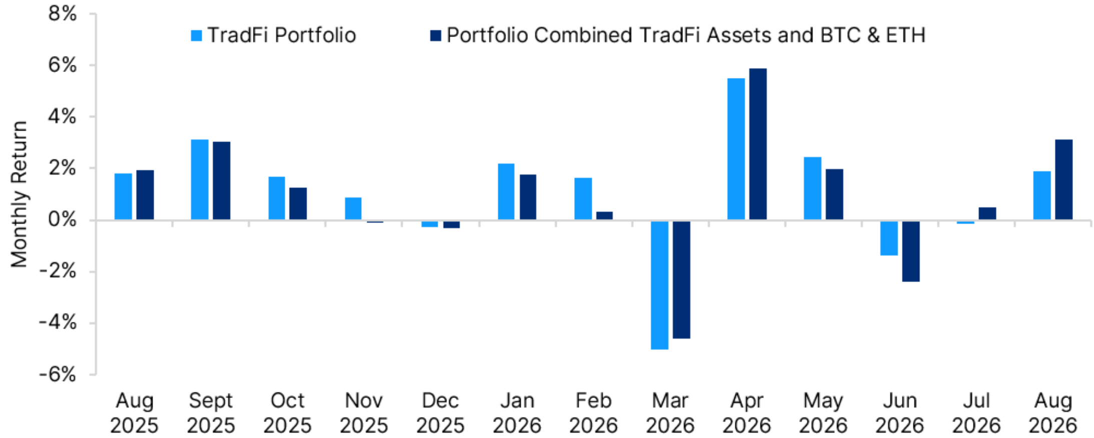
Asset Allocation

The following assets were used to construct the TradFi portfolio, and returns were compared against adding BTC and ETH:

Asset Class	Selected Assets	Rationale	Weight
Equities	S&P 500 Index Funds	Broad market exposure and potential for long-term growth	47.50%
Bonds	U.S. investment-grade aggregate bonds (iShares Core U.S. Aggregate Bond ETF)	Stability and regular income	28.50%
Commodities	Gold	Hedge against inflation and economic uncertainty	9.50%
Alternatives	FTSE EPRA Nareit Global Real Estate Index	Income generation and diversification	9.50%
Crypto	Bitcoin and Ethereum	Largest coins in market cap with relatively less volatility	BTC: 2.50% ETH: 2.50%

crypto.com RESEARCH

TradFi vs Crypto-Exposed Portfolio Returns



Note: The traditional portfolio includes: S&P 500 index funds (^SPX), iShares Core US Aggregate Bond ETF (AGG), and FTSE EPRA Nareit Global Real Estate Index. BTC and ETH each accounts for 2.5% in the combined portfolio.
As of Aug 31, 2026 Source: Crypto.com Research

- Bridgewater Associates founder **Ray Dalio** recommended holding gold and "a bit of Bitcoin" as protection against potential debt, monetary, and geopolitical risks. Dalio suggested gold could comprise 10%-15% of a portfolio, framing Bitcoin as a secondary macro hedge. While these remarks reinforce Bitcoin's role as a store of value, they reflect an individual investment perspective rather than a forecast or formal allocation recommendation.
- Brokerage firm **Charles Schwab** plans to add Solana (SOL), Avalanche (AVAX), and Chainlink (LINK) to its Schwab Crypto platform, expanding its digital asset offering beyond Bitcoin and Ether.
- **BlackRock** launched two tokenized money market funds, BSTBL and BRSRV, to back stablecoin reserves. Designed for institutional investors, the funds invest exclusively in cash, short-term U.S. treasuries, and overnight repurchase agreements across multiple blockchains to preserve principal stability and liquidity.
- **Wells Fargo** announced plans to offer tokenized deposits for its corporate clients. Scheduled for a fall rollout, the initiative leverages blockchain technology to facilitate 24/7, real-time cross-border and B2B settlements.

3. Outlook

3.1 Projects and Tokens

Bitcoin (BTC)

- Based on our research, global Bitcoin owners grew by 2.5%, from 364 million in December 2025 to 373 million in June 2026.
- Bitcoin climbed back toward $78,000 in August, supported by improving market flows and renewed investor interest. Onchain metrics suggest that 30-day apparent-demand — an estimate of net spot demand relative to newly created BTC supply — recovered sharply from deeply negative levels (roughly -206,000 BTC on July 23) to move back above zero (36,900 BTC on August 22) for the first time since February 2026. The shift suggests that spot accumulation is once again absorbing new supply.

Ethereum (ETH)

- Co-founder **Vitalik Buterin** updated the network's roadmap to prioritize quantum-computing readiness and user privacy. This strategic adjustment focuses on safeguarding the blockchain against future cryptographic threats while enhancing base-layer transaction shielding and zero-knowledge proof scalability.
- Ethereum developers proposed **EIP-8361**, which would eliminate staking rewards once staked ETH hits 50% of network supply (roughly $112 billion). Founders of Aave and ether.fi pushed back against the proposed "yield burn," arguing it would hinder ecosystem growth and create complex tax issues.

Solana

- Global remittance provider **MoneyGram** expanded its crypto cash "Ramps" service to Solana, enabling two-way cash-crypto conversions through a single API.

Others

- **Ethena Labs** announced plans to integrate equity-perpetual basis trades into the reserve collateral strategy for its synthetic dollar, USDe, expanding its hedging model into stock-linked derivatives to capture non-crypto yield streams.

- **World Liberty Trust**, a crypto venture linked to Donald Trump, secured a preliminary conditional bank charter from the Office of the Comptroller of the Currency (OCC). The entity plans to operate as a national trust bank focused on the issuance and custody of its USD1 stablecoin, though the charter restricts traditional activities like taking deposits or issuing loans.
- Onchain metrics reveal rapid user migration following the **Zcash** network upgrade, with Ironwood becoming Zcash's largest shielded pool, holding approximately 3.8 million ZEC (nearly $3.2 billion).
- The **Cardano** community approved a 120 million ADA allocation from the treasury to boost liquidity across native DeFi protocols.
- **Harmony** executed a full blockchain state rollback to reverse an exploit that artificially inflated the ONE token supply. The team wiped approximately 109,000 transactions, opting against selective transaction restoration to prevent state inconsistency.
- **Cosmos Labs** recommended an immediate chain halt for public blockchains running Cosmos EVM module versions below v0.6.2 or v0.7.2 after a vulnerability in vesting account logic resulted in exploits across three chains, including Mantra, KiiChain, and TAC.

3.2 Token Unlock Calendar

Date	Name	Symbol	No. of Tokens	USD Amount	% of Market Cap
2026-09-05	Ethena	ENA	171.9M	$27.7M	1.75%
